Do your part by reporting suspicious activity to Airport Security

Security Policy Statement

Airport security is one of the major cornerstones of Winnipeg Airports Authority (WAA). As the Airport Operator, WAA has the overall responsibility for the management, coordination, integration and implementation of the airport's security program and initiatives. Airport security requires the participation and involvement of many stakeholders (airport operators, air carriers, CATSA, police, tenants) working in a collective partnership to ensure a comprehensive and integrated approach to airport security. WAA provides a lead role in planning and coordinating security activities with all partners and stakeholders in an effort to promote a proactive, risk driven and multi-layered security program.

This approach enables Winnipeg's airport community to proactively adapt to ever changing security threats and ensures that an effective and efficient security posture is continually maintained while mitigating operational impacts and providing positive stakeholder and customer experiences.

Vince Dancho, VP Operations
Winnipeg Airports Authority
